

Wasif Tufail

SENIOR SOFTWARE ENGINEER · RUBY ON RAILS

aliwasif93@gmail.com wasif@happytenant.ae +92 323 7979346 Lahore, Pakistan

LinkedIn GitHub

SUMMARY

Senior Software Engineer with **7+ years of experience** specialising in **Ruby on Rails, PostgreSQL, Hotwire and API design**, including **5+ years at HappyTenant** building a large-scale **multi-tenant property-management SaaS** for the UAE and Qatar markets. Expert in modelling complex business domains — leasing, invoicing, maintenance, inventory — and shipping them end to end: schema, background processing, third-party integrations and UI. Strong track record in **payment gateways, accounting integrations, large-scale data migrations** and **mobile APIs**, with a focus on correctness, test coverage and maintainable modular architecture.

SKILLS

Languages	Ruby, JavaScript, SQL, HTML, CSS
Frameworks	Ruby on Rails 7, Hotwire (Turbo, Stimulus), Grape, Sidekiq, jQuery
Architecture	Multi-tenancy, modular monolith (Packwerk), REST & JSON APIs, service objects, background job pipelines, MCP servers
Data	PostgreSQL, MongoDB (Mongoid), Redis, Firebase / Firestore, full-text search (pg_search), Ransack
Auth & Security	Devise, OmniAuth, Doorkeeper (OAuth 2.1), Pundit policies, approval workflows, audit trails (PaperTrail)
Integrations	Stripe, Telr, UAE Direct Debit, QuickBooks, Xero, Twilio, Mailgun, Google OAuth, OpenAI / VAPI, Bayut, Dubizzle, Property Finder
Frontend	Tailwind CSS, Slim, ViewComponent, Polaris, Import maps, responsive design
Testing & DevOps	Minitest, Capybara / Selenium, CI, StandardRB / RuboCop, AppSignal, Git & GitHub PR workflow
Methodologies	Agile / Scrum, code review, conventional commits, feature-branch workflow
Tools	GitHub, Jira, Slack, Postman, VS Code, Claude Code

Senior Software Engineer (Dubai – Remote)

HappyTenant · 2021 – Present

- Core backend engineer on a **multi-tenant property-management platform** (leases, invoicing, work orders, tenant / landlord / vendor / agent portals) serving companies across the UAE and Qatar; **2,000+ commits** merged to production.
- Designed and delivered a **PDF template builder** with per-module autofills for leases, invoices, work orders and tenants, letting customers produce their own contracts and statements with no developer involvement.
- Built a complete **parts-inventory module** — SKUs, stock lines, units of measure, consumption strategies and automatic stock allocation from work orders — including bulk import with undo.
- Led **large-scale customer data migrations** (leases, invoices, tenants, documents) from legacy systems, writing idempotent import services with per-record skip / error reporting and rollback jobs.
- Integrated **payment gateways** (Stripe, Telr, UAE Direct Debit), **accounting** (QuickBooks, Xero), **listing portals** (Bayut, Dubizzle, Property Finder), Twilio SMS, Mailgun and **Firestore** / **Firestore** sync for the mobile apps.
- Built the **JSON / Grape APIs** powering the iOS and Android apps, **Pundit-based role permissions** with hierarchical approval workflows, and **Sidekiq** pipelines for invoice schedules and notifications.
- Shipped a read-only, tenant-isolated **MCP server** (OAuth 2.1 via Doorkeeper) so customers can query their own data safely from Claude.
- Modularised the monolith into **Packwerk packs** with enforced dependency boundaries, and modernised the frontend to **Hotwire**, **Stimulus**, **Tailwind** and **ViewComponent**.
- Own production incidents end to end: triage in AppSignal, root-cause fix, regression test, PR review and release.

Mid-Level Rails Developer (Lahore)

AALI Solutions · 2020 – 2021

- Backend development on client **Ruby on Rails** applications with a focus on data integrity, security and maintainability.
- Designed and built **REST APIs** consumed by mobile apps, including authentication and versioning.
- Integrated third-party services — **Google**, **Stripe**, **Tap Payments**, **Firestore**.

Junior Rails Developer (Lahore)

Coder Plus · 2018 – 2019

- Full-stack work on **Rails 4** applications: models, controllers and HTML / JavaScript / AJAX front-ends.
- Implemented authentication and social login with **Devise** and **OmniAuth** (Facebook, Twitter, LinkedIn).
- Worked across several projects and roles to meet delivery deadlines.

HappyTenant

Role Senior Backend Engineer

Technologies Ruby on Rails, PostgreSQL, MongoDB, Redis, Sidekiq, Hotwire, Grape, Packwerk, Firebase, Stripe, QuickBooks, Xero

Website <https://happytenant.io/>

- Property-management SaaS covering the full landlord–tenant lifecycle: listings and leads, leases and renewals, invoicing and collections, maintenance work orders, snag lists, bookings and accounting.
- Multi-tenant by company with subdomain routing, five distinct user portals (staff, tenant, landlord, vendor, agent) and a super-admin analytics layer.
- Companion iOS / Android apps driven by the JSON API and Firestore sync; documents generated through the in-house PDF builder.

PDF Template Builder

Role Lead Developer

Technologies Rails, Stimulus, Turbo Frames, PDF generation, custom-field engine

- Drag-and-drop designer where companies build contracts, statements and work-order reports from module-aware placeholders (lease, invoice, tenant, work order, purchase cost breakdowns).
- Autofill engine resolves nested records, custom fields, attachments and computed totals at render time; templates are versioned per company.

Parts Inventory & Work Orders

Role Lead Developer

Technologies Rails, PostgreSQL, Sidekiq, Turbo Streams

- Inventory items with SKUs, stock lines by location, units of measure and configurable consumption method (FIFO / first-available) per company.
- Work-order parts consume stock transactionally, track cost categories (labour, cash and credit purchases) and record resolution times for SLA reporting.

Legacy Data Migration Toolkit

Role Developer

Technologies Rails, ActiveJob / Sidekiq, CSV / Excel parsing

- Import services for leases, invoices, tenants, documents and inventory from competitor systems, with field-mapping presets per source, existing-record detection and per-row skip reasons.
- Undo jobs roll back an entire import transactionally; success metrics surface new vs. existing vs. skipped records to the operator.

HappyTenant MCP Server

Role Developer
Technologies Rails, Doorkeeper (OAuth 2.1), Model Context Protocol

- Remote MCP endpoint exposing describe_table and run_query tools; every query is validated as read-only and scoped to the authenticated company's tenant.
- Lets customers connect Claude to their own data via a custom connector without touching production write paths.

EDUCATION

Bachelor of Computer Science (BSCS)	2012 – 2016
Government College University (GCU), Lahore	
Intermediate in Computer Science	2010 – 2012
Government Science College, Lahore	

LANGUAGES & INTERESTS

English, Urdu. Web & AI, badminton, cricket.
