- **Databases:** PostgreSQL, MongoDB, Redis
- **Integrations:** Stripe, Telr, Direct Debit, QuickBooks, Xero, Twilio, Mailgun, Firebase, OpenAI
- **Testing & Tools:** Minitest, Capybara, Git / GitHub, CI, AppSignal, Jira

LANGUAGES

- English
- Urdu

WASIF TUFAIL

SENIOR SOFTWARE ENGINEER AT HAPPYTENANT

SUMMARY

Senior Software Engineer with 7+ years of Ruby on Rails experience, including 5+ years at HappyTenant building a multi-tenant property-management SaaS used across the Middle East. I own work end to end and focus on correct, well-tested, maintainable code, with a growing focus on AI engineering.

WORK EXPERIENCE

HappyTenant — 2021 – PRESENT

Senior Software Engineer · Ruby on Rails

- Core backend engineer on a multi-tenant platform (leases, invoicing, work orders, tenant / landlord / vendor portals); 2,000+ commits merged to production.
- Designed and led the PDF template builder with per-module autofills, letting companies produce their own contracts and statements.
- Built the parts-inventory module: SKUs, stock lines, units of measure, consumption strategies and stock allocation from work orders.
- Led large customer data migrations (leases, invoices, tenants, documents) with idempotent import services, skip / error reporting and rollback jobs.
- Integrated Stripe, Telr and UAE direct debit payments, QuickBooks / Xero accounting, listing portals, Twilio, Mailgun and Firestore sync for the mobile apps.
- Built the JSON / Grape APIs for the iOS and Android apps, Pundit role permissions with approval workflows, Sidekiq pipelines, and a tenant-isolated MCP server.
- Built the backend for Snaglist, the property-inspection app: inspection templates, Firestore sync with the mobile app, and PDF reports with photos, signatures and Arabic text.
- Modularised the monolith into Packwerk packs and modernised the frontend to Hotwire, Stimulus, Tailwind and ViewComponent.

AALI Solutions — 2020 – 2021

Mid Level Rails Developer

- Back-end development on client Rails applications with a focus on data integrity and security.
- Designed and built REST APIs consumed by mobile apps.
- Integrated Google, Stripe, Tap Payments and Firebase.

Coder Plus — 2018 – 2019

Junior Rails Developer

- Full-stack work on Rails 4 applications with HTML, JavaScript, AJAX and JSON.
- Implemented authentication and social login with Devise and OmniAuth (Facebook, Twitter, LinkedIn).
- Multi-tasked across projects and roles to meet deadlines.
